M38 Tranexamic Acid

Scope of Practice	P
Classification	• Antifibrinolytic
Usual Presentation	• 500mg/5ml ampule
Mechanism of Action	• Tranexamic Acid blocks the conversion of plasminogen to plasmin, reducing fibrinolysis, reducing blood loss.
Indications	• Uncontrolled bleeding secondary to trauma • Significant bleeding associated with post partum hemorrhage
Contraindications	• Known allergy • >3 hours since time of injury or start of bleeding
Precautions	• First trimester pregnancy • Renal impairment • Females taking oral contraceptives • Concurrent thromboembolic disease process • Suspected subarachnoid hemorrhage
Side Effects	• Thrombosis • Convulsions • Hypotension with rapid injections
Adult Dose & Administration	• 1000mg IV. Once only. Administered within 3 hours since onset of bleeding. • Dilute in 100ml normal saline, administer over 10 minutes.
Pediatric Dose & Administration	• 15mg/kg IV. Once only. • Slow IV over 10 minutes.
Use in Pregnancy and Lactation	• Pregnancy: Safety has not been established. However tranexamic acid should be administered if clinically indicated. • Lactation: Safety has not been established. However tranexamic acid should be administered if clinically indicated.
Additional Information	• Nil.
