Dextrose 10%

Scope of Practice	EMT
Classification	• Carbohydrate
Usual Presentation	• 50g in 500ml bottle • 25g in 250ml bottle
Mechanism of Action	• Provides glucose for cellular metabolism, raising blood glucose levels rapidly in hypoglycemia.
Indications	• Hypoglycemia (RBS<70mg/dl)
Contraindications	• Hyperglycemia
Precautions	• Nil
Side Effects	• Hyperglycemia
Adult Dose & Administration	• 125-250ml (12.5-25g) IV/IO • May be repeated if hypoglycemia persists
Pediatric Dose & Administration	• 10ml/kg IV/IO (maximum 125ml) • May be repeated if hypoglycemia persists
Use in Pregnancy and Lactation	• Pregnancy: may cause fetal harm. However, should be administered if clinically indicated. • Lactation: Safety has not been established, However, should be administered if clinically indicated.
Additional Information	• To prevent rebound hyperglycemia, avoid excessive doses of Dextrose 10% - titrate the dose based on the patient's GCS and RBS. • If GCS remains abnormal despite normalized GCS, investigate alternative causes of the patients' condition.
